

**55' house boat "The Job Site" has a new Thermo-shield Roof**

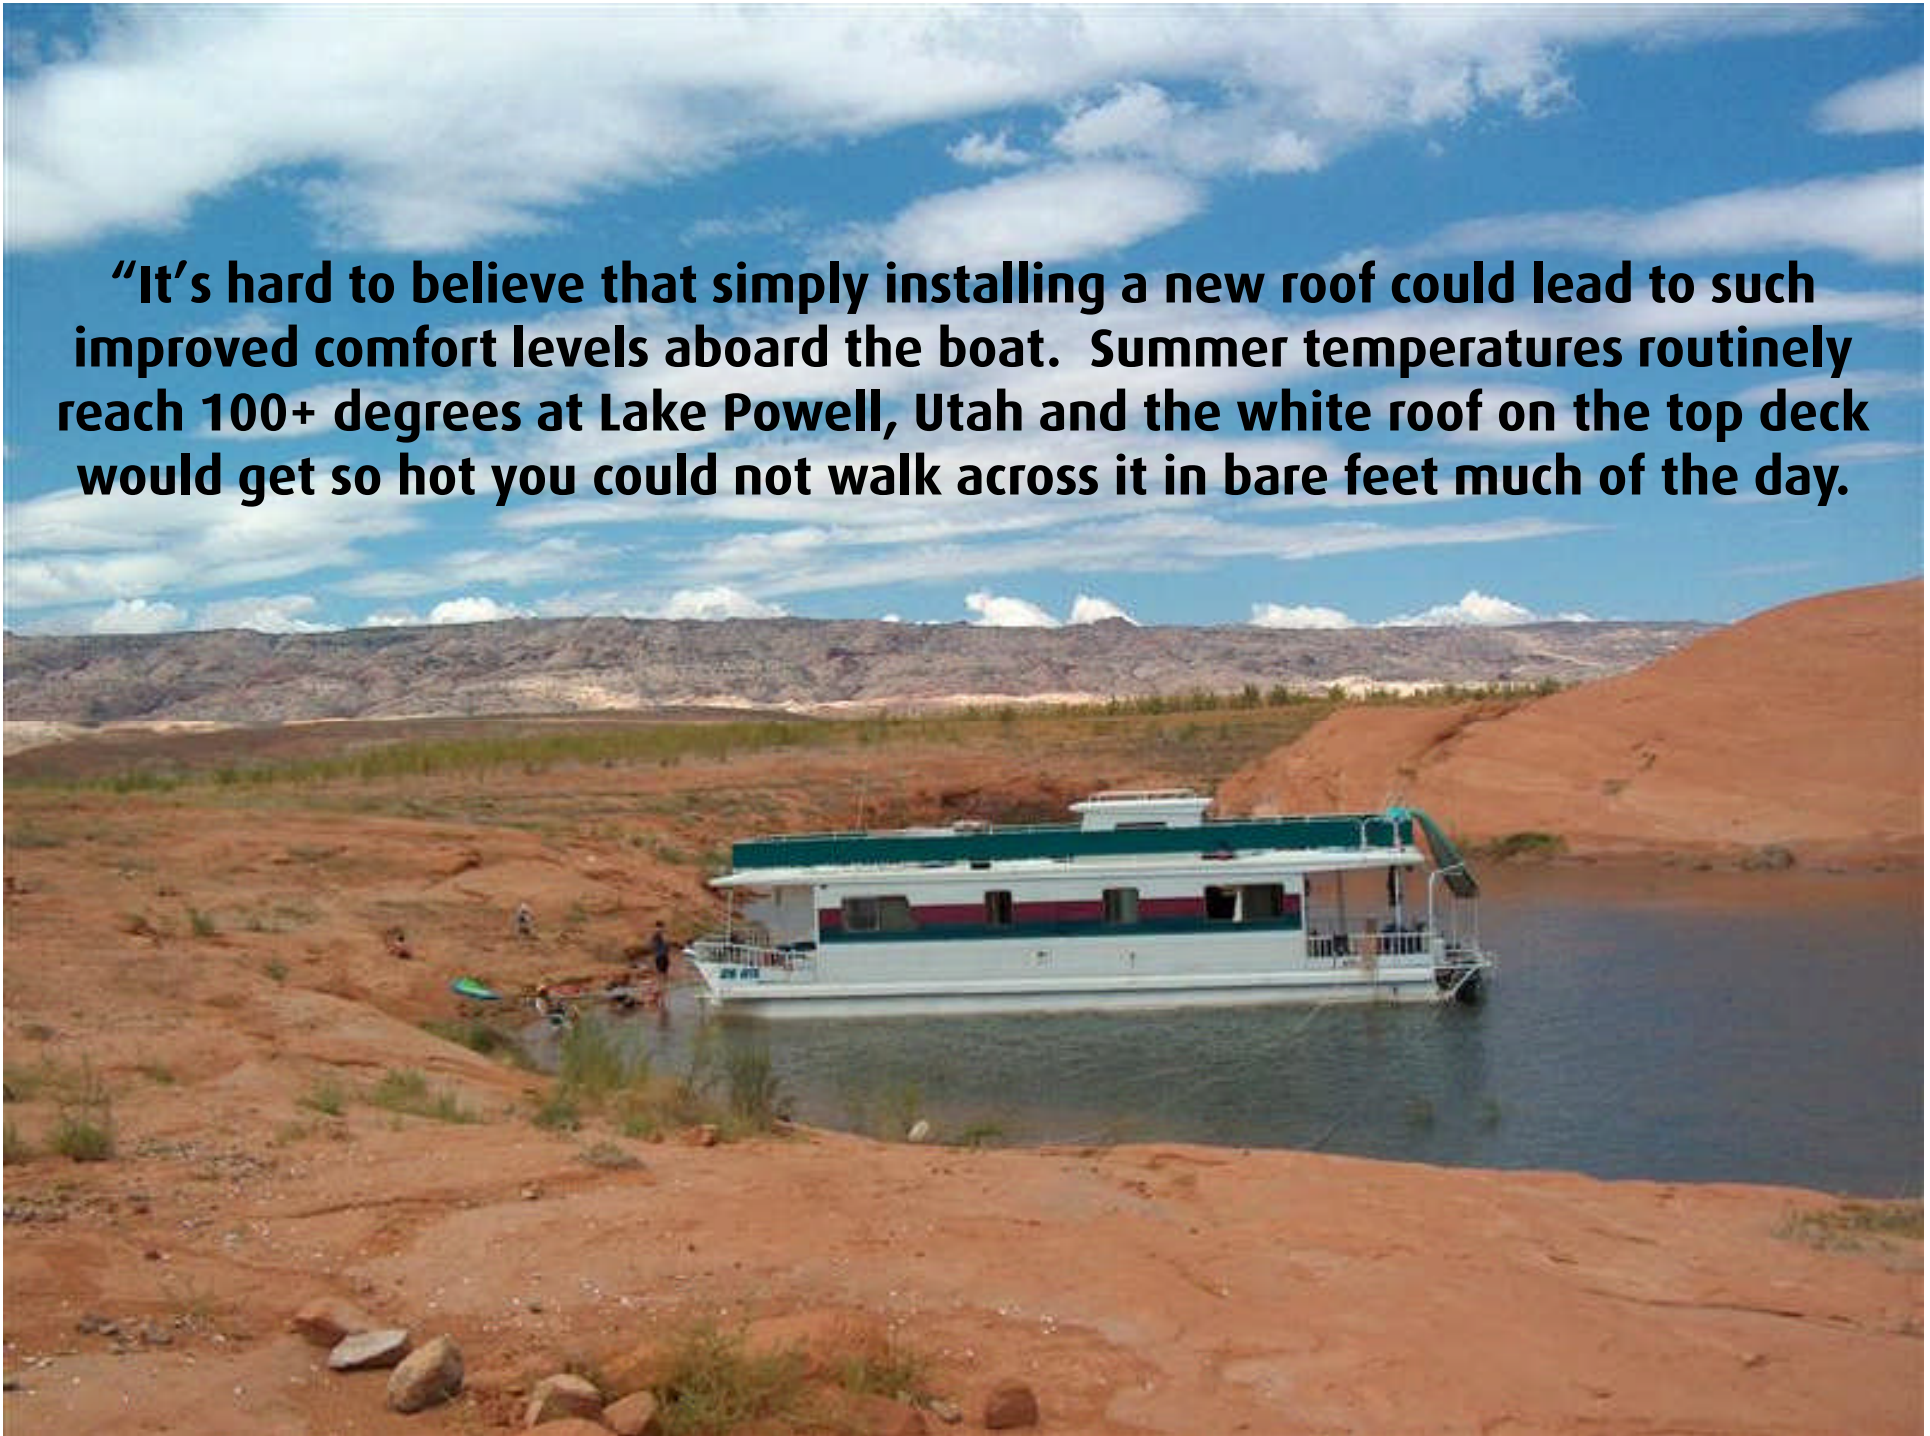

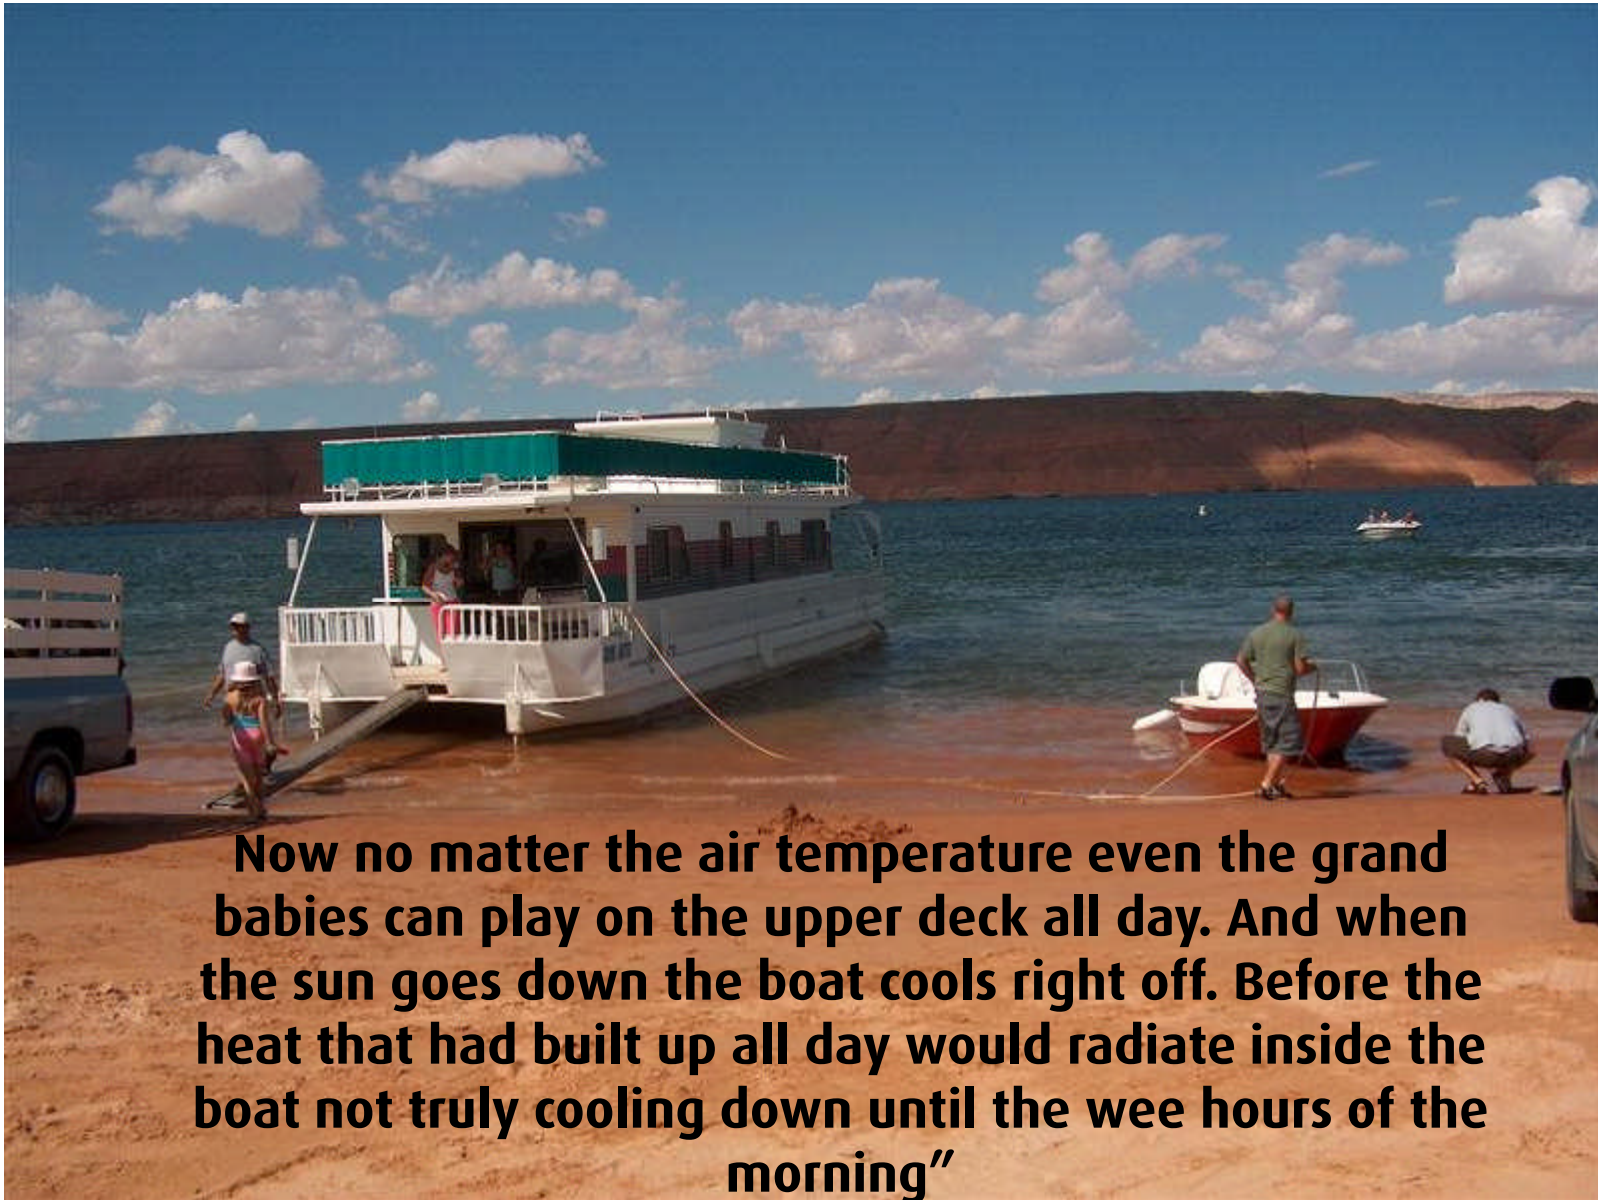

**The white deck on the small red motor boat "The Flying Squirrel" is Thermo-shield Stucco**

**Even the seats have been covered  
with Thermo-shield. No towel  
needed to sit on, no water  
splashed on seat to cool it off**

**“It’s hard to believe that simply installing a new roof could lead to such improved comfort levels aboard the boat. Summer temperatures routinely reach 100+ degrees at Lake Powell, Utah and the white roof on the top deck would get so hot you could not walk across it in bare feet much of the day.**

**Now no matter the air temperature even the grand babies can play on the upper deck all day. And when the sun goes down the boat cools right off. Before the heat that had built up all day would radiate inside the boat not truly cooling down until the wee hours of the morning"**

**Pontoons have also been covered with Thermo-shield and will be in water for next 3 years. (next maintenance pull out) Will update at that time!**

A photograph taken from the deck of a white houseboat. The boat's curved white frame and a tan Thermo-shield roof are visible in the foreground. In the background, another white houseboat is docked on the calm blue water of Lake Tahoe. The shoreline is rocky and covered with green trees under a clear blue sky.

**This house boat at Lake Tahoe, Nevada also has a Thermo-shield Roof**
