

Thermo-shield being applied over old asphalt shingles

Roof was power washed earlier in the day and given several hours to dry

Wear and tear in valley is obvious. Valleys are notorious for leaks issues

Valley is sealed with first coat.

**In a repair situation
you could tint a
gallon or two to
match your shingle
and simple coat a
valley about a foot
and a half on each
side or stop ice dam
issues with a 3 ft
coat around the
eves**

**Installing base coat of
Thermo-shield Roof
with 9" roller**

First coat coverage looks very nice

Roof retains natural shingle appearance

Before

After

**Additional coats are needed for this project to receive a Thermo-shield warranty and will be applied as owners budget allows. They will also be tinted a shade chosen by the owner.
(or perhaps his wife)**

1st coat on front area of home

Un coated

Coated

Immediately results were noticed by this homeowner after applying just one coat on the South and West exposure's. The house stays much cooler
