

# THERMO-SHIELD® COOL CONTAINER

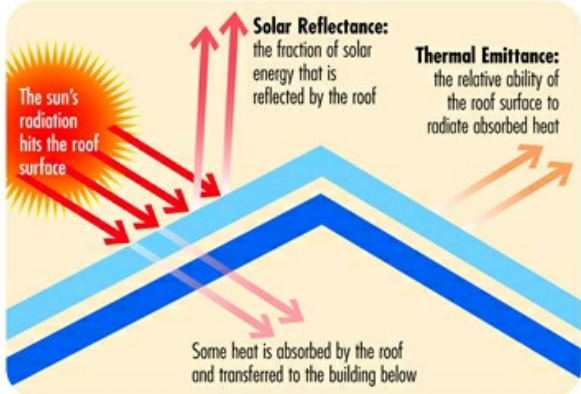

CALL US NOW!  
239-234-5832

This Modular Container is coated with Thermo-Shield Roof Coat, a true Energy Saver!

Thermo-Shield® Roof Coats are highly efficient, energy-saving, flexible coatings, made from a water-based pure acrylic resin system filled with hollow sodium borosilicate glass micro spheres. Each micro sphere acts as a sealed cell and the entire mastic acts as a thermally efficient blanket covering the entire structure. These coatings are non-toxic, friendly to the environment and form a monolithic (seamless) membrane that bridges hairline cracks. They are completely washable and resist many harsh chemicals. Thermo-Shield® Roof Coats have high reflectance and high emittance as well as a very low conductivity value. Thermo-Shield® Roof Coats greatly reduce thermal shock and heat penetration by keeping roof surfaces much cooler in hot summer weather. They offer UV protection and low VOC's.

## SOLAR REFLECTIVE INDEX 110

- Reduction of energy used and cooling costs
- Downsizing of air-conditioning equipment
